Regarding paper

This brochure is printed on Magno matt classic 135 gsm (inside) and Magno matt classic 250 gsm (cover) manufactured at Sappi Fine Paper Mills which are ISO 9001:2000 and ISO 14001 certified and EMAS registered. The pulp used for Magno is bleached, chlorine free.

The timber in the pulp is sourced from sustainably managed forests. Sappi Fine Paper Europe (SFPE) has a Group Chain of Custody Certification for its entire European operations under both the Forest Stewardship Council (FSC) and the Programme for the Endorsement of Forest Certification Systems (PEFC) schemes.

NB: Specifications are subject to change without notice. It is possible that products mentioned in this European catalogue are not available in your country; for more information please contact your local Philips Lighting Organisation.

“Creating value together”

Light controls our daily routine. Our lives are guided by its power and only through light can we play, learn, discover, produce, shop and relax. As a lighting technology partner, it is our job to put all these activities into the right light. As complex as it sounds, ultimately it comes down to one thing: light quality. Light quality naturally depends on application needs and consists of many different aspects, but only through mastering light quality can we - as the lighting industry - achieve satisfied customers and end users. This is what we strive for every day. LED technology enables us to break through previously existing barriers, leading to almost indefinite opportunities. But are these really the endless possibilities you are seeking? Wouldn't you rather prefer a limited number of right options?

“Selling light is about mastering light quality”

To recommend the best light quality for every application, a deep understanding of its attributes is essential. At Philips we break it down into three types of attributes. Temporal aspects that control light modulation over time and frequency. Secondly, spectral aspects that cover perfecting all spectrum related values. And last, spatial aspects that shape light emission of LEDs and optical systems. Combining this knowledge with our passion and the expertise we have gained in the last 125 years, Philips Lighting is able to offer you the basis for a strong partnership: components with the best light quality and highest efficacy.

OEM Technology within Philips Lighting

Philips OEM Lighting is responsible for the development of new light sources, drivers and controls for the new-build luminaire market.

We have been focusing on this market already for over three decades and have a solid track record of technology leadership, combined with excellent application knowledge and market understanding. Prime activities include designing, developing, manufacturing and selling light sources, drivers, LED light engines and controls to luminaire manufacturers for incorporation in new luminaires. There is a wide, varied product portfolio available, ranging from fluorescent, HID, Halogen lamps and drivers to LED downlight, spotlight, linear and outdoor LED light engines.

philips.com/technology

Retail

Fashion and food retailers, department stores and shopping malls use every means they can to appeal to their target group.

This includes careful consideration of the lighting, whereby image, company identity and an appealing atmosphere play a big role in the choice of lighting design. Dependent on the application, different elements come in to play, such as energy efficiency, color rendering ability, the correct color temperature, whiteness, color saturation or dynamic lighting. For all of these specific needs, we can offer a variety of LED light engines and a complementary range of electronic drivers for retail lighting, from downlights, spotlights to linear fixtures, each with their own, unique proposition and features designed around specific retail lighting applications.

Office

The office segment has been dominated for many years by linear lighting solutions.

This segment, which also includes applications such as education and hospitals, has always maintained a strong drive towards energy saving. Legislation and Building regulations have driven the standards applicable on light quality, luminance and energy efficiency in a working environment and this has also highlighted the role of lighting controls. We address this market segment with a full, state of the art, highly efficient LED linear module and drivers portfolio, in a building block format, as well as a luminaire based and standalone controls range.

Industry

The industry segment covers an extensive range of applications such as warehouses, productions areas, cold storage, food processing and parking areas.

This segment has a strong drive towards energy saving and lower maintenance while enabling high quality and uniform lighting for optimum visual performance and visual comfort creating a more efficient and productive workplace. Our module and driver portfolio enables cost effective and reliable systems for extreme application conditions delivering ultimate light quality and comfort. Used with controls, our lighting solutions provide illumination only when and where it is needed for increased energy efficiency.

Outdoor

Outdoor lighting encompasses a vast range of applications, including motorways, highways, residential areas, city centers, sports and tunnel lighting.

All have their particular lighting needs and requirements. The outdoor market is transforming fast from HID light sources to LED and is also a forerunner in looking at how to use lighting control management systems. Here we have a diverse product portfolio available for luminaire manufacturers with a choice of several LED module families and a vast range of Xitanium outdoor drivers, with a focus on robustness, reliability, configurability and connectivity.

Hospitality

Within hospitality lighting, energy savings (sustainability), quality of light, and creating an optimal guest experience are of key importance.

Within this segment, many and different lighting technologies are used in various application areas. Examples are reception and lobby, corridors, guest rooms, bars, restaurants, conference centers and even outdoor areas. Whether its replacing a halogen or fluorescent light source with a retrofit LED lamp, or fully refurbishing relevant hotel areas with (controllable) LED luminaires, Philips can offer the right technology components to realize this. Luminaire manufacturers can be offered a wide range of LED products, such as spotlighting and downlighting systems. But apart from that also linear and outdoor systems find their way towards hospitality segment.

Introducing Paul Nulty

Paul Nulty founded his eponymous lighting design practice in 2011, breaking new ground in the lighting firmament. With a background in theatre design — he graduated in Performance Design from LIPA in 1996 — Nulty decided to leave the world of fantasy behind and focus on real-life scenarios. Crucially, he brought some of the fun and magic of the theatre with him: his ethos is less about fixtures and fittings and pretty much everything to do with creating the right sort of atmosphere.

With over 15 years' experience of collaborating with architects and interior designers on significant retail and hospitality residential and commercial projects, Nulty is fully versed in the interaction of light and space. Innovation continues to be his driving force. As well as pursuing clever concepts, Nulty investigates lighting design approaches that are sustainable and environmentally friendly. Energy efficiency, light pollution and environmental impact also feature high on his list of concerns.

As industry awards jostle for space on his mantelpiece, invitations to share his vision on Architectural Lighting as a speaker on the international stage are dropping through his letterbox. Paul Nulty is tripping the light fantastic but he made time to pop in and share some thoughts here:

**Paul Nulty,
Lighting Design Consultant**

“It’s great to see the shift towards LEDs now becoming more cost effective.”

As Lighting Designers, an important element of our work is the impact that the quality of light has on the built environment, and the emotional connection light facilitates between a person and their surroundings.

High-quality lighting encompasses a number of factors including colour rendering, consistency, light levels, intensity, direction, layering and contrast/drama. These attributes are tools that are used in our architectural lighting schemes - to build a composition of light, to enhance a space and create an engaging atmosphere for the people using it.

The shift towards human factors in lighting has been interesting. As designers, it is something that’s been spoken about for a long time: using light to get people to engage with their environment. Finding that human connection with light is crucial and yet it can be underestimated.

The collaboration between light and technology is stronger than ever. LED is now being used as an advanced marketing and sales tool and this, combined with smartphones, is radically changing the way consumers browse and purchase. Two-thirds of consumers shop with smartphones to purchase online; there is a need to bring customers back to the high street. >>

continuation article

The quality of light and technology

<< Today's state-of-the-art luminaires can communicate via smartphones, tracking consumer movements and subtly increasing light levels to focus on particular products and offers. Light's power is that it is functional and aesthetic; it enables people to act and also feel. Get the combination right and it can positively encourage people to visit shops, buy and connect with the brand.

There is a move towards the blurring of retail and e-tail by enabling smartphones to gather and retain information on a shopper's previous purchases. Shoppers can be alerted with reminders as they walk past specific stores and light can be automatically adjusted to match the ambiance depending on what a customer is buying. This is particularly beneficial to the cosmetics industry, marking a new era in which in-store lighting can finally enhance and offer a truer representation of customers' skin tones as they buy cosmetics (further detail on this later on).

If you look at technology in the industry, it certainly has its place in

'lighting'. However, some technologies — control systems, for example, especially in retail environments — generate cynicism. Daylight linking around store entrances is a case in point because dwell times aren't very long in these spaces. Once you get into the deeper planned department stores, daylight linking almost becomes irrelevant and in some circumstances you need more light in the day than in the evenings.

The shift from traditional lighting to LEDs

In some cases the shift towards LEDs has made lighting quite challenging, as they do not quite provide the 'sparkle' or peak intensity that traditional light sources do, rendering some spaces a little 'flat'.

Until recently it has also been rather difficult to justify the additional cost associated with LEDs.

Historically the tipping point between energy saving and increased capital expenditure has been three to five years, and most retailers only work on a three-year programme. As costs are obviously coming down, this is

becoming much easier. The landscape is changing and it's great to see the shift towards LEDs now becoming more cost effective.

“LED radically changes the way consumers browse and purchase.”

Gradually, there has been a move away from 'traditional' halide light to LED, which is positive. On the other hand there is still an issue with LED products. Many of these light sources have spectral outputs skewed towards blue or red wavelengths — it's rare to find a source that has both. So, it can be challenging. This is particularly the case in fashion retail where you have to think about trends — where clothing and colours change rapidly from week to week and season to season.

In general, LEDs are especially difficult to use as accent sources in jewellery stores or other shops where retailers need to make products 'pop' and 'sparkle'. It is slightly frustrating when it comes to CRI because when manufacturers produce LED sources

to fit the CRI measurement criteria, it doesn't necessarily mean that the gaps in between those CRI measurement points are good. This too can be challenging. Ideally, there would be a better way to compare LED chips on a broader spectrum than a small number of specific colours or wavelengths.

Bespoke Lighting

At Nulty, we conducted intensive research for the cosmetics industry with University College London (UCL) in collaboration with LED manufacturers to see how we can blend sources of light to ensure an authentic quality of light to match make up colours to the skin. The results have been implemented in two of our clients' stores in London: the new Charlotte Tilbury boutique in Westfield and Cosmetics à La Carte in Sloane Square.

Creating bespoke solutions for our clients is crucial, especially in the kind of environment where the right lighting is imperative to ensure a successful sale and ultimately a happy customer. Essentially, the key thing about lighting in retail is that it can be used to enhance a brand and increase brand awareness.

At Nulty, a close relationship with our clients is essential to ensure we understand their aspirations and their specific brand values. For instance, trend-led retailers who aspire to have a dark and moody feel will need to have the appropriate lighting to reflect this. But we also work with retailers who need their space to be light and airy. Cosmetics à La Carte, for example, had a beautifully bespoke LED lighting scheme with simple track lighting and carefully positioned downlights to create the most flexibility and ensure the spotlight is always on the merchandise to encourage the customer to buy.

A shift towards creativity

There is a shift towards better quality light sources, towards better efficiency and towards more cost-effective light sources. It's a 'win-win' situation as costs are going down and the quality of sources going up. Historically there have been too many manufacturers simply 'shoehorning' LED chips into traditional housings or copying each other's designs. Now there is also a shift towards better products. Ultimately, in this day and age, a light fitting is simply a biscuit tin that houses a LED chip and reflector

(this maybe oversimplifying a little). It's also positive to see more originality and creativity in product design and that's producing a wider palette of aesthetics to choose from.

Finally, when employing innovative design techniques to engage and attract customers to a space, a lighting designer needs to almost be a consumer psychologist who understands the moods and emotions of customers in order to drive their behaviour. By engaging early on in the design process, it is possible to achieve the perfect lighting solution to illuminate a space. Lighting is and continues to be a formidable tool in Retail Design. Technology is clearly a key factor in this. But it is also the considered application and emotional empathy that sets apart the very best lighting schemes.

What's in store for retailers?

Digital transformation of the retail industry is the new reality. In today's connected world, shopping has become a multilayered process. The Millennials, who grew up with 24/7 connectivity, orient themselves before going shopping, on the move and in the store. Retailers must adapt to this behavior, and personalize the customer experience. And it's here that physical stores have an advantage over online retailers, as long as they fuse the street experience with an online and mobile presence. We look at trends in the retail segment, the challenges retailers face, what lighting solutions are available, and the role of Philips OEM in these solutions.

The challenges retailers face

'Shopping as usual' is over. The traditional customer journey – driving to a store and back – is outdated. The Millennials generation shops by discussing with peers, comparing offerings, checking reviews and sharing experiences; at home and in-store with their mobiles. It's the new customer journey and it's blurring the store concept. But it's also making it more personal, digital and convenient. The physical store must engage the digital shopper, rejuvenate spaces and at the same time, reduce the cost burden. There's been a slowdown in 'brick-and-mortar' retail, with foot traffic halving between 2010 and 2013. The amount of new retail space opened per year dropped dramatically in the same period. Nevertheless, over 80 percent¹ of Millennials still prefer physical stores as long as they're fun, interactive and up-to-date. Retailers that recognize this are taking steps to make the in-store experience special. To lure shoppers away from the ease and convenience of online shopping, a store visit must add value. Lighting is part of this as it helps shape perceptions of products and enhances the experience. Lighting also has a role in keeping shoppers connected in the store.

Create a unique retail experience

Luminaire manufacturers are responding to the changing retail landscape. Lighting can help reduce operational costs, enhance spaces and products, create a unique retail experience and enable connectivity. Today's lighting is sustainable, flexible and efficient. Switching to LED and using functions like scheduling, daylight harvesting and presence sensing can save up to 40 percent on the electricity bill. Smart control systems can reduce annual energy costs by another 20 percent (total savings 60 percent).

Lighting facilitates multi-layering, dynamic shop windows and scene setting through dimming and color. Retailers can stay connected with customers by linking the online experience to the in-store experience using lighting-based indoor positioning technology and smartphone apps. Market adoption of indoor location technology is expected to explode by 2020, particularly in fashion, food, DIY, and electronics retailing.

In an example of a 1300 square meter store with 4800 burning hours per year, electricity savings by switching from TL5 and CDM to LED were 40 percent per year (from € 12,605 to € 7,528). Using StoreWise smart control brought this down to € 5,226, representing a total saving of 59 percent.

“
Lighting can enhance the shopping experience, strengthen the brand, extend customer loyalty and increase operational efficiency.”

Lighting in fashion retailing

With the right light, it's possible to transform a store, enhance merchandise and engage customers. Buyers want to experience a product and expect an interactive experience. And there's no better place than in a physical store for a brand to connect and engage with its customers by activating all their senses and building loyalty. Paradoxically, online fashion retailers are opening physical stores as they are an asset for communicating with customers.

Conventional lighting is rapidly fading out, LED lighting is firmly established and techniques are emerging to use light as a 'central nervous system' for retail. Lighting can reflect true colors or enhance their richness. For example, making white garments look whiter. And in food retail, products can look natural and appetizing, and even have a longer shelf life. Retailers recognize the importance of color when choosing a product. Lighting is critical for how colors are presented.

World's best quality of light

Philips creates value through the world's best quality of light. We understand the needs of retailers and shoppers, and support luminaire manufacturers by providing LED drivers and LED modules for luminaires that meet these needs. Our components provide the flexibility, quality of light, visual comfort and efficiency demanded by retail lighting applications. There are three ranges: Fortimo LED SLM gen 6 down- and spotlight modules, Xitanium LED drivers, and YellowDot ready drivers for indoor positioning systems.

Fortimo LED SLM gen 6

Comprises down- and spotlight modules. Luminaire manufacturers can specify a light color, CRI, white tone and lumen package without having to change the complete fixture. The range includes colors optimized for specific lighting applications: PremiumWhite and CrispWhite for fashion retail, and PremiumRed and WarmWhite for food retail.

Xitanium LED drivers

Are down- and spotlight drivers for retail applications. They are reliable, efficient, and easy to configure. The portfolio comprises fixed-output, programmable and emergency LED driver versions. Their design is based on recommendations of international commissions about avoiding visual disturbances to create the right atmosphere.

YellowDot ready LED drivers

Fit the Philips YellowDot program, which enables luminaire manufacturers to certify luminaires for interoperability with our indoor positioning technology. This works by Visible Light Communication (VLC) in which allows individual light points to transmit a unique identifier.

One-stop-support, from design-in to delivery

At Philips we like to support you in all stages of your daily business. My Technology Portal, your personal link to our services, plays a growing role in realizing that goal.

The user friendly dashboard offers you at any time a complete library of product information, product launches and phase-outs, as well as order- and marketing related information. It also provides access to our online service tools and direct connection to relevant contacts and news. Did you already discover all benefits the of My Technology Portal? We invite you to scan the advantages below. Check them online and get out of it what's in it for you!

Portfolio

- order history and quantity
- phase-out information
- search & excel download

Webshop

- see available samples
- order samples
- track & trace your order

News

- webinars

Easy Design-in Tool

- saving you precious time
- easily upgrading your solutions
- approved combinations

Making your work easier every day!

With Easy Design-in Tool you create the ideal LED configuration in a minute. It automatically calculates the consequences of your choices and helps you to easily manage the growing complexity of LED systems.

New:

Truly indispensable

Philips cares for your business and precious time. That's why we have developed Easy Design-in Tool. Less than two years after its release thousands of luminaire designers and product engineers incorporated Easy Design-in Tool in their daily routine. This tool not only helps to select the best driver-module combination, but also shows how to connect the components and how to set the driver for the given purpose. The validity of the outcome is verified and approved by Philips and is covered under Philips warranty after purchase. No wonder it soon became - and still is - the benchmark in the market.

Performance prediction at luminaire level

At Philips we keep on improving Easy Design-in Tool. Latest and greatest addition: driver efficiency by its operating point. Now you can compose a full system and evaluate all its relevant parameters in actual operating conditions, even mimicking luminaire performance! Also new are the search function and request price button.

More ease of use, via My Technology Portal

We enthusiastically encourage you to create an account in our My Technology Portal. Using Easy Design-in Tool once you're logged in, you can directly check component availability for the solution you selected and jump to our web shop with the shopping cart filled. A click on the price request button will quickly lead to a quotation from your own sales representative.

“More often than not, Easy Design-in Tool will suggest a better driver than I had in mind. Saving me time and money and optimizing my system in the process.”

Oded Drori (Gaash), Product Engineer

MultiOne configuration software

Customize your devices, **simple and fast.**

With MultiOne configuration software, our intuitive tool, you can meet specific requirements of your customers with a limited portfolio of programmable devices. Depending on the type of device, driver or sensor, a combination of features can be configured to create diversity, extra security and costdown improvements.

Use our
MultiOne software
to configure the devices
to your customers needs.
Free download via
philips.com/multione

Main benefits

✓ One multi-functional tool

You can program a luminaire, test it, configure it automatically in production, read out its status and do a complete quality analysis if there are returns from the field. All with one intuitive tool compatible with all Philips configurable drivers.

✓ Ultimate flexibility

Access to the features built into the device (driver or sensor) offers you the flexibility to configure your devices to match specific requirements. It enables optimization of installation, last minute changes, easy diagnostics and maintenance.

✓ Innovative

We bring innovation to your business by allowing you to wirelessly program all Xitanium LED drivers using our MultiOne SimpleSet technology.

Specific features

✓ Functionality

- Adjustable output current
- Adjustable light output
- Adjustable startup time
- End of life indication

✓ Security

- Module temperature protection
- Active cooling
- DC emergency
- OEM write protection
- OEM traceability

✓ Cost Down

- Constant light output
- Energy meter
- Dimming interface
 - * 1-10 V dim level
 - * AmpDim
 - * LumiStep
 - * DynaDimmer
 - * Corridor mode
 - * Touch and dim

Just choose the right interface to get started

We made it very easy to get started. The MultiOne software is free to download from our website. You only need a windows operating pc or laptop with USB connections and choose the MultiOne interface that fits best into your process.

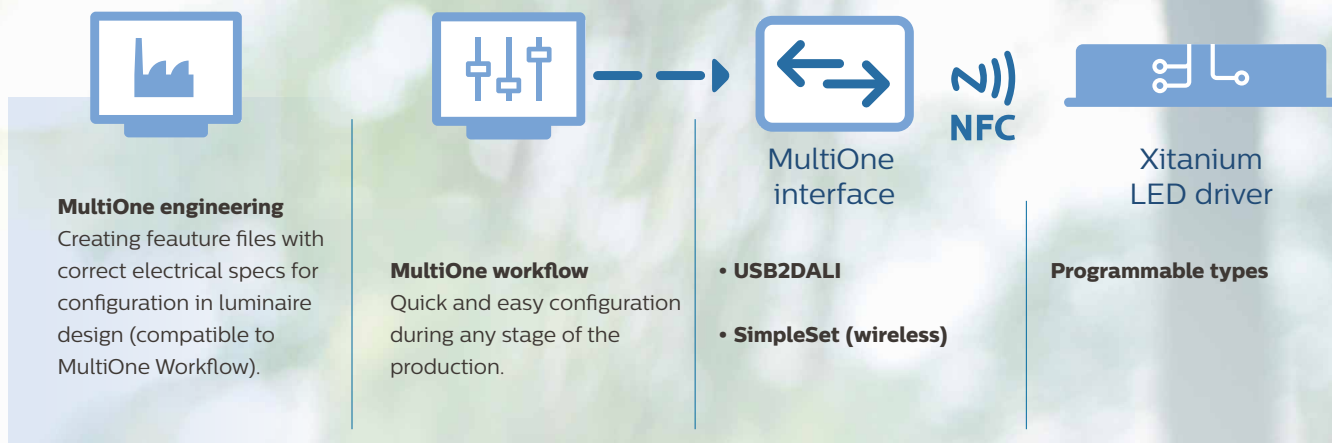

Jan Fitters
Product manager

Configuration set-up

For (re)configuration after installation you can use Philips Field App

MultiOne engineering

Creating feature files with correct electrical specs for configuration in luminaire design (compatible to MultiOne Workflow).

MultiOne workflow

Quick and easy configuration during any stage of the production.

MultiOne interface

- USB2DALI
- SimpleSet (wireless)

Xtitanium LED driver

Programmable types

Philips MultiOne interface	
Product name	12 NC
LCN8600/00 MultiOne interface USB2DALI	9137 003 46703
LCN9610 MultiOne SimpleSet interface	9290 009 99406
LCN9620 MultiOne SimpleSet interface	9290 009 99506

LCN8600/00 MultiOne interface USB2DALI

The interface that can be used with the MultiOne PC software to commission, configure, diagnose devices via the DALI interface.

LCN9610 and LCN9620 MultiOne SimpleSet interface

The interface that can be used with the MultiOne PC software to powerless configure, diagnose devices via the wireless SimpleSet interface.

SimpleSet, for wireless configuration

We immediately recognized the benefits of SimpleSet in our organisation to be flexible in our product-offering for spot- and downlight.

Let's connect

saving energy and costs

Connectivity

Feel the potential of connected lighting

“ Get connected with tomorrow’s market.”

saving
energy and
costs

Connectivity has grown beyond its promise. Cities are getting ‘smarter’ every day and facility managers in offices and industry are also discovering the potential of connected lighting as a resource for collecting data, saving energy and managing space. Connectivity offers a tremendous possibility to add value to your luminaires.

Sensor ready = future proof

The Philips Xitanium SR LED drivers are sensor ready, meaning they can be easily connected to a wireless sensor, making them perfect for versatile use in buildings and city management systems. The intelligence is already built in, ready to interface with and power exactly the sensors your customers need. Our drivers are future proof, as sensor ready will be the new standard for connectivity. Thanks to our SR Certified partner program you can choose from a wide variety of quickly expanding possibilities.

Step into smart lighting

Our growing portfolio of connected components smooths your path into this dynamic world. Our proposition is spearheaded by the Philips Xitanium SR drivers, Philips EasyAir sensors and Philips Field Apps which control and configure drivers and sensors by means of a smartphone. All work seamlessly with each other. So step into smart lighting now and get connected with tomorrow’s market.

Connectivity - linear lighting

New Philips drivers sensor ready are ideal for use with sensors and building management systems. With its integrated DALI 2.0 power supply it is easy to power sensors and wireless modules directly from the driver. It also features integrated energy metering for use in building management systems from the SR Certified program. This program with key building management and sensor vendors ensures that certified sensors and controllers work seamlessly with the Xitanium SR driver. For more information go to our webpage at philips.com/xitaniumsr.

The EasyAir sensor range is a brand new range with presence and daylight sensors that can be used all across offices, including open plan offices, meeting rooms and corridors. The EasyAir sensors' single-box, luminaire-mounting format and, powered by Xitanium SR, a two-wire connection will save time and costs when integrating them into your luminaires.

The EasyAir sensors are ready for the future. By integrating the EasyAir sensor into your luminaire, all work is done to enter the connected world of tomorrow. So let's get connected.

Connectivity - outdoor lighting

New Philips outdoor drivers sensor ready are ideal for use with Smart City management systems. This driver simplifies the design and production of connected luminaires that use intelligent lighting controllers from our SR Certified partners by reducing wiring and component count. It adds new features like diagnostics and accurate power metering. Furthermore, it enables luminaire manufacturers to design and build future-proof solutions that align with phased investment capabilities of municipal authorities. Using the driver in combination with industry-standard Zhaga connectors enables sensors and other connected devices to be added to the luminaire at a later date. This makes cost-effective upgrades possible as financial resources become available. For more information go to our webpage at philips.com/xitaniumsr.

The SR Certified partner program **working seamlessly together**

If you are looking for connected lighting functionality beyond the basic capabilities of our components, the place to start is our SR Certified partner program. The growing list of partners includes manufacturers of building management systems, city management systems and sensor and control manufacturers that are certified to work with Philips Xitanium SR drivers. Close cooperation ensures all partners' products and services work seamlessly with our connected lighting components. It's a seal of approval to help you find the right partners to supply complementary components for your connected luminaires.

SR Certified partners

Sensor and connectivity module manufacturers

- CP Electronics Ltd.
- Magnum Energy Solutions
- Philips
- Samsung Electronics Ltd.
- Silvair
- WattStopper®
- Steinel
- Goeee

Building Management systems

- Digital Lumens
- Enlighted
- Nedap
- Organic Response

City Management systems

Light
that sells

“ Lighting up the brand experience: spot on.”

The right lighting is a key factor in improving retail sales. It can make a product shine and enable customers to really live the brand experience. At Philips we know how to translate the world of lighting specifications into LED lighting solutions with the look and feel your customer has in mind.

The perfect light for each product

Our complete Fortimo LED SLM gen 6 portfolio is designed to light up desire. We offer a wide variety of solutions on a single platform to meet all your customer's needs. In addition to our standard range we've developed superior series for specific lighting applications. Crisp white is the outstanding choice when stores demand the best quality of light possible. It brings out the crisp whites and vibrant colors in fashion retail applications. Premium white gives you excellent light quality without sacrificing efficiency. If you are looking for an appetizing experience for food retail, food premium red and food warm white are the solutions of choice.

Premium flexibility

The Fortimo LED SLM gen 6 portfolio allows you to select a product based on quality of light, lumen per Watt and/or lumen per Euro: all very easy to design-in. Each module is interchangeable, enabling retailers to create different lighting effects throughout the entire store with just one consistent luminaire range. For full system flexibility our Xitanium driver portfolio offers a wide range of high-end single current, window and programmable drivers. All products come with a five-year Philips Lighting system warranty.

LED innovations at pre-launch phase

Fortimo LED SLM gen 7 HD

Philips Lighting continues to push the limits of COB technology. Fortimo LED SLM gen 7 will continue to focus on Quality of light, energy efficiency and performance. A "High Density" portfolio will be created which combines a higher amount of LEDs on smaller LES sizes. This great combination result in the perfect solution for applications that require a high output with narrow beam optics to generate a high punch effect. We will introduce the 1204 LED package with a LES size of 9mm enabling output up to 3000lm. Release is expected in Q2 2017.

Fortimo LED SLM gen 6

Fortimo LED SLM gen 6 continues to focus on the combination of quality of light and performance. The standard portfolio now also contains LES sizes 6.5 and 23 mm. This results in an extensive CoB portfolio for pointsource applications from 800-10000 lm. Please also check the online Easy Design-in Tool for your perfect system combination (for more information see page 18-19).

* This overview represents the global Fortimo SLM portfolio, please contact your Philips Lighting representative for local availability.

** Module efficacy is calculated for the typical lm output. For more detailed specifications (including lifetime) please check the datasheets or the Easy Design-in Tool.

*** The CoB size defines the compatibility with the SLM Holders. The CoB size is also given in the name of the Holder.

**** LES size 23 mm is only compatible with the Fortimo H PI 2828 holder. (see page 41).

Module driver compatibility

The Fortimo LED SLM portfolio is compatible with multiple Xitanium LED drivers. Xitanium LED drivers are available as a built-in or independent driver, dimmable or with a fixed output. For a detailed overview of all available Xitanium indoor point drivers, please go to the Xitanium indoor point driver section at pages 84-91.

Fortimo SLM gen 6 - premium white

Fortimo LED SLM premium white provides the best combination of quality of light and energy efficiency. With color points carefully chosen just below the black body locus in combination with the best color gamut, premium white is ideal for creating ambience, fresh whites and depth of color for retail environments. The PremiumWhite portfolio is available in all Fortimo LED SLM gen 6 CoB sizes. The Fortimo premium white portfolio is now extended with 3500 and 4000 K. Perfect for a fresh, cool but rich color experience without sacrificing energy efficacy.

Fortimo LED SLM gen 6 - holder

Fortimo LED SLM gen 6 CoBs and holders can be ordered separately. This results in even more flexibility and an even more extensive product portfolio. Optimized holders are available for spot and downlight applications. For pre-cabled luminaire designs holders with Poke-in connectors can be ordered. For the SLM with LES 6.5mm a 35 mm poke-in holder is available. CoB compatibility is defined by the CoB size.

Fortimo LED SLM EaseSelect

Quality of light is key in retail lighting. The need for miniaturization is continuously pushing LED technology for smaller luminaires, often jeopardizing important specifications as flicker, lifetime and reliability. Fortimo LED SLM EaseSelect offers an integrated portfolio that combines the high quality standards of a Philips Fortimo/Xitanium system with the possibility for a luminaire design without a driver box.

efficient
flexibility

Point sources downlighting

**High
performance
downlight
applications**

“Flexibility and efficiency are what counts.”

efficient
flexibility

In public spaces and working environments where the lights are on day and night you can make all the difference with the right downlight applications. Flexibility and efficiency are what counts in these markets.

Benchmark for high-performance

Our Fortimo DLM range is known as the benchmark for high-performance LED downlighting. We offer a complete range of products with lumen packages of 1100 lm, 2000 lm and 3000 lm, each in 3000 K and 4000 K color temperatures. If you combine the modules with our tunable Xitanium LED drivers, you can further optimize flexibility.

Manufacturing convenience

In the Fortimo LED DLM EaseSelect family we have integrated driver and LEDs onto the same board. This produces a convenient and compact solution for your luminaires with high efficacy. The Fortimo LED DLM EaseSelect family further simplifies design-in and increases manufacturing convenience to lower the cost of your future luminaires, without compromising on performance.

A durable solution

The Fortimo DLM EaseSelect has the same mechanical footprint as the DLM Flex, thus continuing the DLM tradition of backwards compatibility. You benefit from a 50,000 hour lifespan and a five-year warranty, so your luminaires will also have the durability your customers demand.

Reinhard Voorspoels

Product Manager
LED downlighting

Fortimo LED DLM Flex gen 2

Being the trend setter in high performance LED downlighting with the Fortimo DLM range, Philips introduced the next generation of the Fortimo LED DLM Flex family. Being backwards compatible with the previous generation, Fortimo LED DLM Flex gen 2 enables further optimization of existing as well as new flexible downlight luminair designs.

Fortimo LED DLM EaseSelect

Fortimo DLM EaseSelect is a high performance driver on board (DoB) solution, delivering an excellent quality of light with low flicker. Having an integrated driver and the same mechanical footprint as existing DLM solutions (DLM Flex), enables easy and hassle free design-in. The Fortimo brand promise brings with it the assurance of quality, reliability and performance.

CertaFlux LED DLM EaseSelect

Certaflux DLM EaseSelect brings with it good performance in a cost effective driver on board (DoB) solution, delivering a high quality of light with low flicker. Having an integrated driver, enables easy and hassle free design-in.

CertaFlux DL-S

Now you can convert any downlight to LED. The Philips CertaFlux DL-S module makes design-in and development fast and efficient thanks to the innovative design with integrated heat sink and driver. The breakthrough system cost gives it a clear competitive advantage compared to conventional downlighting solutions and makes it an ideal solution for basic lighting. It is available in 1000 and 2000 lm with color temperature choices of 3000 and 4000 K. The quality of light is good with a CRI of 80.

Product specification

Linear lighting

Working
in the light
**of common
sense**

“ We ease the LEDification of lighting.”

best
in class

Based on the total cost of ownership, LED is clearly the preferred lighting system in most retail, office and industry situations. Fortimo linear LED systems are the ideal solution for this LEDification. To ease operation and optimize the result we have introduced some trailblazing novelties.

Time-saving and enhanced light quality

The Fortimo low-flux and mid-flux range have been extended with a 1150mm and 1450mm LED strip. So now you need only one module for a 4ft/120cm or 5ft/150cm luminaire, which obviously saves time. This optimized length minimizes dark ends in the luminaire, compared to standardized modules available on the market. These range extensions are available with the connector on top of or underneath the module. This speeds up assembly and improves the quality of light, as it avoids optical interference in the connector and wires.

Light follows function

We offer a wide variety of modules suitable for the most divergent types of luminaires to meet the numerous manifestations of linear lighting. Our CertaFlux range offers the most cost-efficient solution for indoor LED lighting in general applications. We are continually extending the performance boundaries for high-end applications with our Fortimo range. This range is synonymous with an exceptional quality of light and comes with a five year warranty. Together with our Xitanium driver portfolio, our systems offer you the freedom to fine-tune and differentiate on lumen output, lifetime and efficacy.

Fortimo LED line

Fortimo LED line systems are designed to produce pure white light for general lighting applications with high efficiency levels. The Fortimo LED line portfolio consists of 2 main ranges of products, which have been differentiated by the number of rows of LEDs on the module. The Fortimo LED line 1R system, with 1 row of LEDs on the module, is ideal for applications requiring beam shaping and where light is intended to fall on a vertical surface, such as racking or shelves. The Fortimo LED line 3R systems have been designed to produce high efficiency, pure white light, for general lighting applications where diffuse lighting on the horizontal plane is key. Fortimo LED line high flux is designed to enable LED lighting at higher application heights where more light is needed, such as trunking, battens and high-bay applications in warehouses, factories or big retail stores.

Module driver compatibility

The Fortimo LED linear portfolio is compatible with multiple Xitanium LED drivers. Xitanium window drivers offer the freedom to adjust current settings and to differentiate in terms of lumen output, efficacy and lifetime. The corresponding linear Xitanium driver portfolio includes isolated and non-isolated drivers, in fixed light output, 1-10 V and DALI versions. For a detailed overview of all linear Xitanium LED drivers see pages 74-83.

Create the ideal LED configuration in a minute.
Saves time and upgrades your solutions. [Check philips.com/technology](https://www.philips.com/technology)

Fortimo LED strip

Design is a major differentiator for you as a luminaire designer/manufacturer. But you cannot afford to compromise on the quality of light or to accept less than the best in terms of energy efficiency. This fourth generation of LED strip makes sure you don't have to. Fortimo LED strip allows you to design high-performance, slim linear LED luminaires without having to compromise on design freedom, quality of light, or total cost of ownership. The systems are ideal for use in luminaires for direct lighting in offices, banks, schools, public buildings, supermarkets and anywhere where a small, slim, flexible form factor is appreciated. Fortimo LED strip high flux is designed to enable LED lighting at higher application heights where more light is needed, such as trunking, battens and high-bay applications in warehouses, factories or big retail stores.

Module driver compatibility

The Fortimo LED linear portfolio is compatible with multiple Xitanium LED drivers. Xitanium window drivers offer the freedom to adjust current settings and to differentiate in terms of lumen output, efficacy and lifetime. The corresponding linear Xitanium driver portfolio includes isolated and non-isolated drivers, in fixed light output, 1-10 V and DALI versions. For a detailed overview of all linear Xitanium LED drivers see pages 74-83.

Suitable for:

Fortimo LED square

Fortimo LED square systems consist of white light LED modules with square outer dimensions delivering high energy efficiency and high quality of homogeneous light. These smart systems are completed with the Xitanium drivers offering the flexibility to adjust current settings to differentiate on lumen output, efficacy and lifetime. Fortimo LED square systems are ideal for office applications where the luminaires require a very homogeneous exit surface window. Typical applications are recessed, surface mounted and suspended office luminaires.

CertaFlux LED strip

While further improving the specifications of our Fortimo range, we focus on offering the most cost efficient solution for linear LED lighting with our CertaFlux range. CertaFlux LED strip systems offer good product performance and functionality, with good quality of light, meeting market needs for basic lighting. These cost effective systems are completed with the CertaDrive linear LED driver portfolio, specifically designed to match the CertaFlux LED strips and focused on lumen packages for high volume applications.

CertaFlux LLS EaseSelect

CertaFlux LLS EaseSelect is Philips' first linear driver-on-board solution, light engines and corresponding drivers in one. Having an integrated driver enables an easy design-in and exchange, while speeding up the assembly process and thus lower cost for the OEM. Target customers are OEMs with focus on the entry/trade segment of the market, especially for waterproof applications.

CertaFlux LED square

CertaFlux LED square systems are ideal for office applications where the luminaires require a very homogeneous exit surface window. Typical applications are recessed, surface mounted and suspended office luminaires. The design of the LED module is backwards compatible and the LED pitch remains unchanged compared to the Fortimo LED square 2500lm, enabling to have one luminaire design for both the high performance and cost oriented segment.

reliability.”

xtremely
reliable

LED is rapidly conquering the market of outdoor and industrial lighting. To expand your opportunities in this growing market, you want to make a difference in design, speed to market, lifetime or product specifications. At Philips we understand that optical design is your core competence, just as developing components is ours. To add to these qualities we provide maximum design flexibility in combination with unrivaled reliability.

Where customization counts

The Fortimo Fastflex differentiation family gen 4 is designed to operate with third party lenses, offering you an unlimited number of optical configurations. The latest FastFlex gen 4 DA and DAX series includes new building block modules to further expand your possibilities. At the same time we have upgraded the efficiency and the temperature operating rate. New in this series is the Fortimo FastFlex differentiation protected gen 4, the first that enables you to get IP66-rating on a module. It also simplifies design and reduces the loss of light. The obvious result: enhanced efficacy.

All in one

The Fortimo FastFlex gen 4 'standard' offers you a 'one stop shop'. The board and lens provided by Philips enables a short fixture development cycle.

For the world outside

Our solid LED Xtreme solutions stand for best in class energy efficiency and outstanding reliability. Their suitability for dimming and tele management makes the systems ideal for industrial, road, residential and urban lighting.

Fortimo FastFlex gen 4

The outdoor and industrial lighting market segment is a highly diverse field: while some OEMs distinguish themselves through fixture design and speed-to-market, other firms differentiate their commercial propositions based on optical (photometrical) performance, efficacy, cost, or product life time. As an answer to this diversity, the fourth generation of the Fortimo FastFlex portfolio has been developed to offer a suitable solution to each type of OEM, meeting every project requirement.

The standard Fortimo FastFlex are products designed for OEMs looking for a “one-stop-shop”, where boards and lenses are provided by Philips allowing a short fixture development cycle, while enabling basic optical flexibility with its eight standard light distributions. For OEMs looking to have a unique photometrical performance, the FastFlex differentiation array (DA) as well as the NEW FastFlex differentiation protected (DP) are designed to operate together with third party lenses, enabling endless optical configurations. The FastFlex DP additionally allows maximum cost effectiveness and fixture efficacy via IP protection.

The Fortimo FastFlex gen 4 brings also the introduction of the X product line; Products specially designed to deliver maximum efficiency levels and suitable for road lighting applications.

In line with previous iterations of the Fortimo FastFlex, the fourth generation delivers state-of-the-art performance as well as access to the Philips LED module reliability program results.

NOTE: light output is specified at board level (lens optical losses not included).

When using standard Fortimo FastFlex lenses, optical losses of 4% need to be taken into account.

Specification given at 530 mA and Tc 80 °C.

* Typical Color consistency specified at beginning of life time.

** Charts presenting module's Tc and current Vs expected lifetime (up to 120,000 hours), as well as module's Tc and current Vs expected lumen depreciation (L70 and above) are available via your sales representative.

Fortimo LED linear light module (LLM) gen 4

The Fortimo LED LLM gen 4 is recognized as one of the most comfortable LED light source for outdoor application; Its high quality natural white light, as well as the easiness to design low glare fixtures, make this product a perfect choice for existing or new luminaires in road or urban lighting. There is a choice of warm (3000 K) or neutral (4000 K) white light with CRI > 70.

Indoor linear drivers

Ready
for future-proof
solutions

“
Customization
has never
been easier.”

ahead
in flexibility

LED, with its limitless possibilities, brings a whole new dynamic to office, retail and industrial lighting. Combined with the huge potential of connectivity this leads to a constant stream of innovations. We feel the urge on the OEM side to manage LED generations and the growing complexity as we head for a fully customized future. Not to mention the eternal drive for more efficacy and further miniaturization.

Number one in design flexibility

Our Xitanium LED linear driver portfolio offers you everything you need to match the divergent demands of your customers. In addition to fixed-output, dimmable (1-10 V and Touch & DALI) and programmable versions, we now introduce sensor ready drivers for those who want to achieve the benefits of connected lighting. Customization has never been easier. Xitanium LED drivers with SimpleSet technology inside can even be wirelessly configured. With a unique driver height of only 16 mm, we literally leave you more space for design.

Unequaled performance

Our Xitanium LED linear drivers come with an efficiency of up to 94% (!) and enable a perfect quality of light. They all have a low ripple output current of 4% at low and high frequencies to avoid interference issues and ensure a camera and scanner-friendly performance. By combining them with Philips Fortimo LED modules, you can optimize the efficacy of your application. LED modules from other manufacturers can be an alternative option as long as the V/I specifications fit the operating window.

www.philips.com/oemwebshop

Xitanium 60W '250V' TD/16 (non-isolated/HV)

See page 78

NEW!

Improved

- Low profile 16mm height
- Operating window 2.0
- SimpleSet technology
- Low output ripple of 4% for high and low frequencies
- Low standby power
- Glow-in-the-dark 2.0

Coming soon!

LED innovations at pre-launch phase

Xitanium 36W & 75W fixed output + SimpleSet (isolated/LV)

Like for non-isolated/HV we will offer customers the choice whether they want SimpleSet or LEDset. Next to that the other portfolio improvements like lower output current ripple for high and low frequencies and 'real' 21 mm height drivers will be included.

NEW!

Xitanium 35W & 60W fixed output 16 mm (non-isolated/HV)

After introducing low profile 16mm for TD LED linear drivers beginning 2017 also fixed output drivers will come in 16 mm height profiles.

NEW!

CertaDrive 30W & 44W fixed output 21mm (non-isolated/HV)

These drivers are specially developed to operate the new CertaFlux gen 3 LED boards. Together they are the system that offer good enough quality that can be great.

NEW!

Suitable for:

Retail

Office

Industry

Xitanium LED linear drivers

HV (non-isolated) LED drivers

Xitanium LED non-isolated drivers are ideal for professional general lighting applications such as HV linear office systems. The non-isolated drivers are available in DALI dimmable and programmable, 1-10 V dimmable and fixed output versions. The non-isolated drivers offer the highest efficiency, lowest cost and smallest dimensions and are available in 17 W, 35/36 W, 60/75 W all in T5 form factors but with various lengths.

New operating windows 2.0 are being introduced in 35 W and 60 W too boost efficiency again. The fixed output version are available in LEDset or SimpleSet versions. Where for the DALI drivers both SimpleSet and LEDset are integrated in one driver. At last specific '250 V' drivers are being introduced to avoid creepage and clearance challenges for OEM's making their own L2 LED boards.

Next the new operating windows 2.0 the new drivers feature SimpleSet technology, low output current ripple of 4% for high and low frequencies, low standby power for TD drivers and Glow-in-the-Dark 2.0 specifications.

Xitanium LED linear drivers

LV (isolated) LED drivers

Xitanium LED isolated drivers ideal for professional general lighting applications such as LV linear office systems. The isolated drivers offer LEDset and are available in DALI dimmable and programmable, 1-10 V dimmable and fixed output. The isolated drivers offer ease of design-in and simpler approbation process and are available in 17 W, 36 W, 75 W all in T5 form factors but with various lengths. New DALI drivers feature 'real' 21 mm height, SimpleSet technology, low output current ripple of 4% for high and low frequencies and low standby specifications. The better ripple current ensures no interference with security-, cell phone- or webcams and scanners.

The Xitanium LED drivers are based on Philips experience and knowledge of conventional fluorescent technology. The reliability of the LED solution is further enhanced by specific features that protect the connected LED module, like: reduced ripple current, thermal derating, all drivers feature central DC operation. Application oriented operating windows offer luminaire design flexibility. The operating windows are stacked so that a wide number of LEDs can be operated.

CertaDrive LED linear drivers

HV (non-isolated) LED drivers

CertaDrive LED drivers are designed to fulfill the market need for essential lighting. The CertaDrive LED drivers offer basic specifications such as specific current and voltage settings, optimal to operate CertaFlux LED modules. Lifetime of the driver is set at 50,000 hours and warranty period is three years.

These LED drivers are also interesting for OEMs producing and selling their own LED-boards. If the specific V/A specifications of these CertaDrive LED linear drivers do not suit the LED board specifications of the OEM, Philips offers the possibility to create fast derivative LED drivers with the required V/A of the OEM. This new process is called Fast lane release and enable customized driver development within 8 weeks for high volume driver needs (25 K pcs driver/year). The new drivers are being produced in Poland to facilitate faster and more flexible supply besides the commercial benefit that they are marked 'Made in Poland'.

TrustSight LED emergency drivers

Philips TrustSight LED emergency systems are designed for your safety. Philips LED TrustSight solutions are designed to secure light in case the normal mains voltage is failing. In that case the TrustSight driver immediately switches over to battery mode to light-up vital objects such as escape routes.

Indoor point drivers

Let's focus on
wellbeing

“
Visual comfort
is a quality that
pays off.”

superior
quality
of light

Visual comfort is an important quality of light in point source applications. The right light enhances the wellbeing of visitors and staff and is proven to have a positive effect on productivity and performance. That's why we are working with the recommendations of international commissions to avoid visual disturbance and create the right atmosphere. Our strong portfolio offers you all you need to meet your customers' requirements and follow the key trends, such as miniaturization in spotlighting.

No flicker and stroboscopic effects

Visual flicker and stroboscopic camera effects are a thing of the past with our new generation Xitanium point LED drivers. Top performance is guaranteed thanks to reduced ripple current in the entire range and Amplitude Modulation dimming in our Touch & DALI drivers. The addition of other features like high efficiency, hot wiring and DC operation compatibility makes Xitanium LED drivers a unique choice in point source applications.

Managing complexity

We're well aware that complexity management is a key topic in LED lighting. That is why we are continuously improving our driver portfolio to make it 'easy to work'. Our application-oriented driver designs make your choice simple yet comprehensive at the same time. Products vary from single current (plug & play) to fully programmable drivers, based on a few key application-oriented designs and their accessories. In combination with our intuitive MultiOne configuration software (and wireless SimpleSet technology) this offers you endless possibilities.

Coming soon!

LED innovations at pre-launch phase

Xitanium mini DALI

Miniaturization is taking the next step in Xitanium DALI family with new Xitanium mini DALI range. Xitanium mini DALI range will be available in two versions as 20W and 36W. Also same as fixed output range, built in drivers will be converted to independent drivers via add on strain relief caps.

Suitable for:

Retail

Office

Hospitality

Xitanium LED downlight and spotlight drivers

Dimmable and fixed output LED drivers. Power ratings and related operating windows from 20 W to 75 W. Various housing designs: Linear housed form factors for tracks in '3 in 1' design, conventional HID housings for down- and spotlighting, WH housing for independent use with strain relief and loop-through and mini housing for track and recessed spotlight applications. Depending on the family drivers feature following specifications: operating window, SELV, improved ripple current, temperature derating, hot wiring, 12 V output for active cooling or decorative effects, central DC operation. The addition of SimpleSet technology in certain drivers will now also enable wireless configuration in manufacturing environments.

* Not suitable for 50 W/m Rset driver only.

Rset

The current of Xitanium window drivers can be set by use of a resistor. Certain resistor values are offered by Philips.

Depending on the driver type, a poke-in resistor or a JST connector has to be used. Please check the Xitanium driver's datasheet for more detailed information.

CertaDrive LED downlight and spotlight drivers

A new fixed output single current LED driver portfolio. Power ratings are from 15 to 40 W with available current options from 0.35 to 1.05 A. With an optimized lifetime of 30,000 hours CertaDrive range is an ideal proposition for basic spot and downlight applications.

TrustSight LED emergency drivers

Philips TrustSight LED emergency systems are designed for your safety. Philips LED TrustSight solutions are designed to secure light in case the normal mains voltage is failing. In that case the TrustSight driver immediately switches over to battery mode to light-up vital objects such as escape routes.

Product specification

Driver	Driver housing	Output Power	Output Current Range	Output Voltage range	SELV	Self test	Pieces per box	Order code
TrustSight Basic P 15-55V 3W	190 x 46 x 32	3W	54-200mA	15-55V	Yes	Manual	10	8718696596425 00
TrustSight Pro P 15-55V 3W	190 x 46 x 32	3W	54-200mA	15-55V	Yes	Automatic	10	8718696596449 00
TrustSight DALI P 15-55V 3W	190 x 46 x 32	3W	54-200mA	15-55V	Yes	Automatic	10	8718696596463 00

* Driver contains strain-relief for independent use, brackets for build-in and bi-color LED status indicator.

Batteries	Battery type	Voltage	Capacity	Emergency time (3W)	Pieces per box	Order code
TrustSight Batt Box NiMH 7.2V 1300mAh	NiMH	7.2V	1300mAh	1 hour	10	8718696596487 00
TrustSight Batt Box NiMH 7.2V 2500mAh	NiMH	7.2V	2500mAh	3 hour	10	8718696596500 00

* Batteries are mounted in box for independent use and harness (cables).

Xtreme drivers

**When
the going
gets tough...**

“ Ultimate uptime is our selling point.”

reliable
to the max

Intense heat, frigid cold, dust clouds, hail and lightning: outdoor and industrial luminaires need to withstand harsh conditions in addition to everyday stress resulting from varying temperatures, moisture and external contact. Luminaires are furthermore increasingly used as valuable data collectors for city and building management systems. Philips meets both challenges.

Rock solid and sensor ready

Our robust Xitanium LED Xtreme drivers are specifically designed to withstand powerful vibrations, high moisture levels, driver case temperatures of up to 90 °C and severe surges. This results in an industry-leading 100,000 hour lifetime, a survival rate of 90% and a five year warranty. These are powerful selling points for customers who want to minimize the need for repairs - because they know what that costs. For those who manage 'smart cities' and 'smart buildings' we offer our expanding range of sensor ready drivers.

Programmable: lite and full

Our lite programmable configuration offers basic flexibility options. For complete flexibility (a wide range of features) choose full programmable LED drivers. Both ranges provide unrivalled efficacy and superior specs and features, such as SimpleSet technology to effortlessly configure the driver without turning it on.

Xtreme drivers

Just released!

Order now at
www.philips.com/oemwebshop

**Xitanium LED lite Programmable Xtreme:
150W in S240 housing, with new current window
of 0.5-1.5A**

See page 99

**Xitanium LED lite Programmable Xtreme:
165W in new compact C170 housing, with three current
windows and a 5-step DynaDimmer**

See page 100

Coming soon!

LED innovations at pre-launch phase

Philips is working on various new launches for both Xitanium LED lite and full programmable Xtreme drivers. Please stay tuned for our product announcements.

Xitanium LED drivers - programmable Xtreme

Philips Xitanium programmable Xtreme LED drivers with global input voltage (UL, ENEC) are designed to deliver the high performance, protection and configurability. The Xtreme technology ensures maximum robustness and protection with a very long lifetime. Configuration of programmable drivers can be done via DALI and the MultiOne software.

Xtremium LED drivers - full programmable Xtreme

New Philips Xtremium full programmable Xtreme LED drivers are designed to deliver the highest performance, reliability and configuration possibilities. The portfolio offers both standalone as remotely dimming protocols to further decrease energy use with latest LED technologies. The proven Xtreme technology ensures maximum robustness and protection for a very long lifetime. These drivers are the preferred choice for your demanding applications such as outdoor and industry. Configuration of these drivers can be done via both the universal DALI or with SimpleSet, which is the latest technology for reliable, fast and easy way to change and read-out the settings.

Xitanium LED drivers - lite programmable Xtreme

with SimpleSet
technology!

Philips Xitanium lite programmable Xtreme LED drivers are value engineered to deliver a carefully selected feature set and high-end performance, making it a preferred choice for many outdoor applications. The portfolio offers high flexibility with a customizable operating window, enabling differentiation in LED lighting designs via system tuning and being prepared for LED efficacy upgrades. Configuration of programmable drivers has never been easier with the integrated SimpleSet feature, a fast and wireless way to change and read-out settings.

Xitanium LED drivers – single output current

The Philips Xitanium LED drivers with single output current provide constant current output, optimal for a single string of LEDs. The family offers a selection of drivers with different currents and wattages in a range of convenient form-factors. The lower wattage versions are SELV (Safety Extra Low Voltage) compliant, enabling easy LED light engine design.

Xtreme LED drivers 1-10V dimmable

Philips Xtreme single current LED drivers bring performance, value for money, long life and reliability to demanding outdoor and industrial LED lighting applications. Ideal for road lighting, urban street lighting, area/flood lighting, high-bay lighting and tunnels, they are designed to be easy to integrate into your luminaires. The drivers are compact, and you can choose between build-in and independent versions that are protected against water and dust ingress to IP67. The range includes 75, 150 and 250W versions with lifetimes up to 100,000 hours. The light output is fully adjustable via a 1 to 10V analog dimming interface.

Xitanium LED drivers – low voltage DC input

Philips Xitanium LED drivers with low voltage DC input are designed for off-grid solutions running on battery (direct current) power. The drivers incorporate dimming intelligence, which translates the scarce energy collected by the solar system or wind turbine into the best possible system performance and reliability. Originally optimized for use with Fortimo FastFlex LED board gen 3, the drivers can be used with different light LED engines.

Philips surge protection devices

The Philips surge protection devices are the ideal solution to the challenge of using LEDs in outdoor lighting. The SPD protects the complete system against high surges that can occur due to for example lightning strikes. Essential for LED systems installed in high-risk areas, the advantages of using the SPD are not limited only to LED systems. The product can be used in any new or existing lighting solution, regardless of technology.

Display lighting

A young girl with dark hair, wearing a black and white striped sleeveless top, is smiling broadly in a grocery store aisle. She is holding a large, ripe orange. The background shows shelves stocked with various products, including packaged goods and fresh produce, illuminated by bright overhead lights.

“

With the premium light quality.”

The key need of food and fashion retailers is to make merchandise shine at the point-of-purchase while consuming less power. That's why we have expanded our InteGrade LED portfolio with two major innovations that bring unrivaled product visibility, attractiveness and efficiency.

Premium light quality, throughout the store

Our new InteGrade premium white family offers you superior visual display with best-in-class efficiency. And you can lower energy costs at the same time. It lights up shoppers' desire with an optimized color spectrum for enhanced white performance and astonishingly lively rich colors. Combined with our premium white spotlighting solutions the InteGrade LED system premium white gen 3 enables you to create a single look and feel for the whole store, for the ultimate shopping experience.

Also great news: InteGrade high flux family, with its breathtaking performance. Its exceptional uniform light distribution brings the light right down to the lowest shelf. The bright, high-quality light displays products more attractively even when behind a glass door. Its miniaturized design means the light source itself is placed out of sight, which further maximizes attention on the products.

All our state of the art LEDs have minimal output degradation and practically no color shift over time. Undesirable hot spots, glare and reflections are virtually eliminated by their unique feature – a continuous line of light.

Maximum design flexibility

We offer you maximum design flexibility thanks to a range of engine lengths, color temperatures, accessories and Xitanium constant voltage LED power drivers. The modular components fit together easily to simplify design-in and ensure hassle-free installation.

Philips InteGrade LED products

InteGrade LED system gen 2

The InteGrade LED system gen 2 has been designed to enhance the merchandise colour perception, by means of its specially formulated CRI 90 LEDs which deliver a perfectly balanced colour rendering in different CCTs, including the brand new food version featuring a single color line of light. The InteGrade LED engines have been designed to match the most common application lengths, reducing the number of components needed per installation; yet maintaining the outstanding flexibility that its modular approach offers, enabling the creation of odd size lighting solutions to match every project specification.

The InteGrade LED narrow beam engines and fixtures enable easy creation of narrow-beam lighting solutions for vertical and horizontal display applications. The narrow beam in combination with the extremely small dimensions makes this system suitable for applications like chiller doors, where there is no room to place a sizable lighting solution. The unique optical system directs the light precisely where you want it, thus making optimum use of the light and energy. The InteGrade LED system is completed by Xitanium constant voltage LED power drivers, cables, mounting profiles, clips and other accessories offering maximum design flexibility.

Philips InteGrade LED products

InteGrade LED system high flux gen 2

The InteGrade LED system high flux gen 2 takes the very successful InteGrade range to a whole new level of specifications beyond imagination. InteGrade LED system high flux gen 2 has been designed for ultimate product visibility and superior visual display of the merchandize by means of an outstanding bright light distribution combined with a miniaturized unobtrusive design directing the customer focus on the merchandize. This new range offers a breathtaking performance with superb lumen and lux levels and an exceptional uniform light distribution due to its revolutionary optics that brings light right down to the lowest shelf. Furthermore, its specially formulated CRI90 LEDs deliver a natural merchandise color in different CCTS enhancing visual display of the merchandise. Note that InteGrade LED high flux gen 2 engines are not standalone engines and they need to be integrated with a heatsink for thermal management to achieve 50 khrs lifetime. The cabinet framework can be used for that. Our Design-in service is available to support you. InteGrade LED engines have been designed to match the most common application lengths, reducing the number of components needed per installation; yet maintaining the outstanding flexibility that its modular approach offers, enabling the creation of odd size lighting solutions to match every project specification. Thanks to a range of engine lengths, accessories and Xitanium constant voltage LED power drivers the InteGrade LED system high flux gen 2 offers maximum design flexibility to enable a vast variety of innovative refrigeration systems with style, modernity and functionality according the needs of the stores. InteGrade LED high flux gen 2 engines are not standalone engines and they need to be integrated with a heatsink for thermal management and to achieve 50 khrs lifetime.

For canopy and chillers with doors

NEW!

Philips InteGrade LED products

InteGrade LED system premium white gen 3

A better presentation of the merchandize can make products more appealing to achieve maximum impact at the point-of-purchase. The InteGrade LED system premium white gen 3 has been designed for ultimate product attractiveness through a combination of a superior light quality, best light distribution and state-of-art efficacy. This new generation offers an optimized color spectrum enabling enhanced white performance and astonishing lively rich colors for superior visual display of the merchandize while providing an outstanding efficacy up to 125 lm/W to enable lower power consumption. What is exciting is that an ultimate shopping experience can be created by the combination of the InteGrade LED system premium white gen 3 and already available premium white spot lighting solutions enabling one look and feel in the store. This third generation of the very successful InteGrade range includes the brand new canopy version featuring a slim and miniaturized design with a breakthrough optical design enabling a perfect uniform light distribution in the chillers. The brand new InteGrade fixture narrow beam vision provides higher lumen levels and yet maintaining its slim design suitable for aesthetic integration in the applications like chiller doors, where there is no room to place a sizable lighting solution. InteGrade LED engines have been designed to match the most common application lengths, reducing the number of components needed per installation; yet maintaining the outstanding flexibility that its modular approach offers, enabling the creation of odd size lighting solutions to match every project specification. Thanks to a range of engine lengths, fixtures, accessories like mounting profiles, mounting clips, power cables, and Xitanium constant voltage LED power drivers the InteGrade LED system premium white gen 3 offers maximum design flexibility to enable a vast variety of innovative refrigeration systems with style, modernity and functionality according the needs of the stores.

LED display modules

Well/serve-over lighting

Philips LED lighting for refrigeration cases is a sustainable and energy-efficient way to create an enjoyable shopping experience for customers - while at the same time supporting retailers' brand values. LDM524 modules can be used for well counters (under combined cabinets) or serve-over counters.

Complementary partners

We are keen to bring the latest LED innovations to the market that will help you design luminaires that meet market needs. In this process you might be faced with challenges that are not necessarily your speciality, but can easily be solved with the help of the right complementary partner.

Our complementary partners develop parts that are a perfect match with the LED systems we design. We have regular contact with these partners and inform them at early stages of the development road map so they can tailor their products to ensure perfect matches with the LED lighting components we bring to the market. Support for cooling, reflectors, lampholders and optics can be found via the below listed complementary partners. Please visit the websites of the complementary partners for more product information or contact them directly in case you have any specific requests.

Coolings

Asia Vital Components (AVC) CO. Ltd
7F-3, No.24, Wucyuan 2 Rd.
Sinjhuang District
New Taipei City 24892
Taiwan

Lighting definitions explained

Legend technical specifications	Symbol	Definition
Backwards compatible		It can work with an older product or technology
Beam angle	(°)	Exit angle of the light beam
Central beam candela		Power emitted by a light source in a particular direction. A common candle emits light with a luminous intensity of roughly one candela
Chip on board	CoB	Refers to the semiconductor assembly technology wherein the microchip or die is directly mounted on and electrically interconnected to its final circuit board, instead of undergoing traditional assembly or packaging as an individual IC
Correlated color temperature	K	CCT; describes whether white light appears warm (reddish), neutral or cool (bluish)
Color rendering index	CRI	The ability to reproduce the colors of various objects faithfully in reference to an ideal lightsource
Color consistency (initial)	SDCM	Standard Deviation of Color Matching; describing the difference between two colors. e.g. a difference of 1-3 SDCM is virtually imperceptible; a difference of 4 or more is readily visible
Connectivity		The capacity to be connected to other appliances, facilities and the internet
Digital		A collection of evolving technologies that enables generation, collection, analysis, storage in real-time and data exchange
Dimmable average lifetime 10% failure	hrs	Lifetime in hours, defined by reaching 10% failures (i.e. 90% survivors) when dimmed
Dimming range		Dimming range in which the system will perform as specified
Driver power factor		Indicating how effective the driver converts electric current to useful power output
Efficiency range max load		Efficiency when operated at maximum power (not dimmed)
EOC code		European Order Code
Frequency	Hz	See line frequency
Housing color		Color of housing
Input Voltage	V	Voltage required as input for the product
IP classification		Ingress protection defined in terms of object size and water beam protected against
Inrush current peak		Highest current the capacitive components operate at start up
Lifetime	hrs	Lifetime in hours, associated with specific conditions (e.g. lumen maintenance, Tc, failure)
Lifetime 10% failure	hrs	Lifetime in hours, defined by reaching 10% failures (i.e. 90% survivors) for a population
Light output	lm	Output of luminous flux
Lumen maintenance @ 50,000 hrs		% of the original lumen flux remaining after indicated (life-)time for a defined population; e.g. B50/L70 indicates 50% of the population retaining 70% of the original light output
Luminous flux	lm	Total energy emitted by a lightsource across the visible wavelengths of light
Module efficacy	lm/W	Efficiency module; lumen output per Watt input
Module power	W	Energy required to operate the module
Module temperature control		Protective feature with which the driver is regulating down the module power when a certain critical temperature of the module is passed
Passive cooling		Cooling without power consumption
Power factor	Pf	See: driver power factor
Relative humidity	%	Portion of water vapor in a mixture of air and water vapor
Smart fixture		Lighting fixtures that are enabled for connectivity becoming a node in the network by containing one or more sensors and having the ability to change behaviour as a response to a stimulus
System efficacy	lm/W	Efficiency module + driver
System power	W	Energy required to operate the system
Tc life driver	°C	Temperature of indicated point on the product on which the lifetime is based
Tc life module	°C	Temperature of indicated point on the product on which the lifetime is based
Zhaga		Zhaga is an industry-wide cooperation between companies aimed at enabling the interchangeability of LED light sources made by different manufacturers

Your personal technical support!

Our Application and Design-in Engineers are here to help you understand the technical features and interaction of the Philips LED module and driver portfolio and the design-in process.

They will also bridge the gap between technical customer needs and the relevant Philips R&D team, acting as an interface between the two. Remote, on-site technical support, as well as training is offered in order to help facilitate the design-in of Philips LED systems or LED drivers. Also for early sampling requests of products, not yet formally released to the market, the Application Engineers can be approached.

Contact our application engineers:

Wouter Maes
Head of Design-in & Application Engineering LED Electronics

Mail: wouter.maes@philips.com
Mobile: +31 6 21803700

Aashini Cinserin
Application Engineer

Mail: aashini.gulati@philips.com
Mobile: +31 6 11607005

Specialist for:
Point source modules
Point and sensor ready drivers

Jan Richard Huisman
Application Engineer

Mail: j.r.huisman@philips.com
Mobile: +31 6 20599173

Specialist for:
Retail display lighting
and Xtreme modules

Linda Janssens
Application Engineer

Mail: linda.janssens@philips.com
Mobile: +31 6 11565525

Specialist for:
MultiOne & SimpleSet

Priyanka Kumar
Application Engineer

Mail: priyanka.kumar@philips.com
Mobile: +31 6 15274185

Specialist for:
Connected lighting - sensors

Leon Stofmeel
Application Engineer

Mail: leon.stofmeel@philips.com
Mobile: +31 6 11782402

Specialist for:
Linear modules, linear drivers and
Easy Design-in Tool

Design-in support

In addition to application support, Philips can also help luminaire manufacturers with the design-in of LED systems into their luminaires. Typical design-in projects might be: 'LEDifying' existing luminaires, simulating optical or thermal scenarios and evaluating finished prototypes. You can make use of our design-in support for all kind of requests such as:

- Thermal measurements and/or simulation
- Optical measurements and/or simulation
- Mechanical solutions
- Electrical measurements

- Evaluating the quality of light of the luminaire

Please contact your local Key Account Manager to discuss your needs.
